

At Pens of Distinction we not only make pens. Small and large mirrors are a speciality. Made from single pieces of timber, from about 12" high to about 8' high (30cm—2.4m) these mirrors are totally unique and are a feature in any room. The larger mirrors generally are all floor standing whilst the medium sized mirrors are hung on a wall either vertically or horizontally. The smallest mirrors are hung vertically on the wall.

All our mirrors have fixing plates top and bottom so there are two choices of which way to hang them up.

The larger mirrors are ideal for larger rooms and are excellent for reception offices in business premises.

We can also design and make bespoke furniture for the corporate sector such as display units and exhibition pieces. We can turn ideas and concepts into actual pieces of furniture so you don't have to be a designer yourself!

We are continually developing new ideas and would welcome suggestions. We are always willing to work with customers to bring their ideas into reality. Lots of things are possible. Give me a ring and we can discuss it.

Pens of Distinction
Hand crafted wooden pens

Are you looking for something different?

Something which is stylish, feels nice to touch and at the same time can be used everyday?

Look inside and see what can be personalised for you, which will be totally unique and environmentally friendly

There's no air miles in our timber!

All the timber we use is sourced locally by ourselves. Typically it all comes from within about a 5 mile radius of our workshop.

We use windblown trees, branches, trees that have been felled due to disease or in danger of falling over, storm damaged trees or trees that have died. We do not use any imported timber.

All our timber off cuts are used to heat the workshop and dry the timber in a woodburning stove, so nothing is wasted and our heating is carbon neutral.

Some of the timbers we use include oak, yew, rhododendron, hawthorn, silver birch, beech and elm

The above photograph shows a stopper and hangtag made from oak for Cask 888 which was distilled and bottled by The Edrington Group in October 2008 for the Chinese New Year and was sold exclusively in Taiwan.

Above photograph is an example of a laser-engraved log slice coaster

Above photograph shows a fountain pen and roller ball made from rhododendron in a double box

Laser-engraving is an environmentally friendly way to mark or cut objects. Using a laser, objects such as pens and boxes can be engraved up to 1000dpi with images and writing. The mark is permanent unlike printing and will not wear off. No chemicals are used in the process, just a very fine high-powered beam of light and it is very fast

Benefits and Features of our Pens

Bespoke laser-engraving of company names and logos reinforces brand awareness which will lead to further business and more sales

Improve your company/organisation's green credentials by using environmentally friendly and sustainable timber.

The use of Schmidt refills and writing mechanisms will ensure that they will be in use years later unlike some other well known pen manufacturers products. Schmidt are an internationally recognised leader in pen technology.

All the gold plating is 10 carat cobalt-gold which that is durable and long lasting.

Peace of mind with the knowledge that a quality product has been purchased from a business which takes pride in the quality of all their products.

Pens with corporate logos come into the tax-deductible category of corporate gifts so there are no tax or national insurance implications for either the purchaser or recipient in the UK.

Due to the smallness and light weight of the pens and boxes they are easy and cost effective to post anywhere in the world thereby saving money. They are also easily carried in hand luggage should you wish to take some abroad.

As we are the manufacturer you will be dealing directly with the person making every aspect of your gift. We have our own laser for engraving and can advise on every aspect of your choice of timber, pen type, engraving size and placement on the box and/ or pen. Having our own laser also cuts down on the turnaround time and it may be possible to offer a next or 2 or 3 day turnaround order, depending on numbers of course
